Project Name	Web Phishing Detection
Maximum Marks	2 Marks

### Customer Problem Statement:

Phishing websites are one of many security threats to web services on the Internet. There are users who buy products and make payments online. There are websites that ask users to provide sensitive data such as username, password & credit card details, etc., often for malicious reasons. This type of website is known as a phishing website. In order to detect and predict phishing websites, we need a proper solution.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Online buyer	buy a cost-efficient product	the website contains expensive products at the most cheap price and after placing the order, the payment also has been debited from my account.	it was a fake website which showcased the same products from other website at the cheapest price.	Sad and frustrated
PS-2	Online buyer	Order food online	My order was cancelled even after a successful transaction of money.	It was a fake website that cloned the original website and projected as one.	Depressed
